PROJECTS

E-commerce website

- Developed an e-commerce website using Java as the backend language and HTML, CSS, and Bootstrap 4 for the frontend.
- Utilized advanced Java concepts such as Servlets, JSPs, and Hibernate, as well as object-oriented programming principles.
- Implemented a MySQL database for data storage and utilized Hibernate annotations for database operations.
- Designed a user-friendly interface with login pages for different types of users, such as consumers and administrators.
- Implemented pages for displaying products and categories and developed functionality for administrators to add and delete products and categories. Added cart options and implemented a payment gateway.

Organization Android Application

- Developed an application based on the React Native framework.
- Designed the frontend using native components in JavaScript and various native packages.
- Retrieved data using official API's from Kronos UKG.
- Implemented overall user interface and managed input validation to enable various authentications and approvals within the project.
